

Next-Gen Vulnerability Management

**Helping you stay one step ahead
of cybercriminals**

Holm Security helps protect millions of critical assets in both the public and private sectors, making our world a safer place.

Our Next-Gen Vulnerability Management Platform (VMP) creates the foundation for a systematic, risk-based, and proactive cyber defense against modern threats. We provide the insight you need to understand and minimize your attack surface before vulnerabilities are exploited.

Attack Surface Management (ASM)

Automated discovery, monitoring & vulnerability management - all in one

Our platform provides a market-leading combination of Attack Surface Management (ASM) and vulnerability management, creating an efficient, proactive cyber defense.

A single pane of glass

A unified interface offering a comprehensive risk overview, streamlined workflow, and consistent risk model across all attack vectors, enabling teams and individuals to efficiently prioritize and remediate vulnerabilities.

Minimize your attack surface & find blank spots

Effectively minimize your attack surface by continuously and automatically detecting new assets, tracking asset changes, and identifying blank spots and shadow IT.

All attack vectors with automated event monitoring

Identify vulnerabilities and risks in all important attack vectors across your entire attack surface. Our event monitoring ensures that you receive automatic notifications whenever unwanted asset changes are detected.

AI-driven threat intelligence

AI for faster and broader coverage of vulnerabilities and extensive threat intelligence that enriches every vulnerability, enabling you to focus on the remediation tasks that will most efficiently lower risk exposure.

One unified platform

Our platform includes integrated products featuring one workflow and risk model.

System & Network Security

Identifying over 200,000 vulnerabilities across business-critical systems/servers, computers, network devices, office equipment and IoT, Kubernetes, OT (Operational Technology), and cloud platforms.

Web Application Security

Advanced assessment technologies to identify thousands of vulnerabilities, including OWASP Top 10, in modern web applications.

Cloud Security (CSPM)

Secure your cloud-native platforms by identifying thousands of vulnerabilities across Microsoft Azure, Microsoft 365, AWS, Google Cloud, and Oracle Cloud - providing proactive protection for your entire cloud ecosystem.

API Security

Assess your APIs for hundreds of vulnerabilities, including those in the OWASP API Top 10, to ensure robust security and safeguard critical data.

Phishing Simulation & Awareness Training

Conduct simulated phishing attacks paired with customized awareness training to build continuous vigilance and strengthen your human firewall.

Meet today's & future compliance

The future is characterized by a growing number of compliance demands focusing on a systematic and risk-based cyber defense. Organizations can expect more local, regional, and industry-based regulations going forward.

Why Holm Security?

We help you proactively defend your organization against cybercriminals.

1

**Attack
surface
insights**

2

**Unified view
to ease
prioritization**

3

**Powerful
threat
intelligence**

4

**A fully
automated
platform**
