Many organizations struggle to answer basic cybersecurity questions:

Are we investing in the right tools?

How do we prove improvement over time?

What is our actual financial exposure?

Cordaata allows organizations to:

- Demonstrate the return on security investment
- Prioritize remediation by business impact
- Quantify cyber risk in monetary terms

Key Features

- Outline business processes
- Define workflow dependencies
- Identify critical assets
- Align to cybersecurity frameworks
- Assign control coverage
- Collect evidence of controls
- Identify riskiest attack vectors

Key Benefits

- Single source of security coverage
- Automated workflows
- Coverage of security frameworks
- Accurate cyber risk quantification
- Executive-level reporting
- Insight into audit readiness
- Continuous compliance

Strategic Outcomes

Cordaata helps organizations shift from reactive compliance management to proactive, risk-informed decision-making.

- Make confident, data-driven security investments
- Demonstrate ROI on cyber-security initiatives
- Improve resilience by focusing on material risk
- Align security strategy with business priorities
- Communicate cyber exposure in financial terms

Make smarter, risk-based decisions on where to invest limited resources to achieve maximum security impact.
